Jupyter, Theme and Double-click Startup Setup

RustColeone

October 21, 2019

0.1 Jupyter Installation:

Make sure you have **Python** installed And do:

> `pip install jupyter`

After the installation is complete, use the command:

> `juyter notebook`

to start, your browser window should pop up very soon

0.2 Changing Jupyter Theme:

You can install theme using **Jupyter-Theme** by:

> `pip install jupyterthemes`

You can check the list of themes available with:

> `jt -l`

To install a theme:

> `jt -t chesterish`

0.3 Double-click Startup:

You can install **nbopen** for quick double-click startup:

To Install:

> `python3 -m pip install nbopen`

To integrate to your file manager:

Linux or BSD: `python -m nbopen.install_xdg`

Windows: `python -m nbopen.install_win`

Mac: `Clone the repository and run ./osx-install.sh`
